MIDDLE TENNESSEE CHAPTER NEWSLETTER

PASSING THE BATON

It sounds so easy, but watching the Olympic athletes striving to hand that small cylinder to their teammate while running a full speed shows that it takes something special to be done well. If you had to assume your duty in the race to hand it successfully to her? Would you know the "secret" information they know, or have the experience to consider the precautions to make the leg-leg" decisions that you've not had to make yet? How long would you have to know if you were being considered for the task? Or not?

And if you were the one passing the baton to your number two, could you leave today and know everything you have worked hard for, for the past 3 years, will be in good hands? Could you trust your assignment/position/department and not be in fear or that without having to be called back to "fix" foundational mistakes you've implemented?

"Succession planning" is the buzzword, but its a real thing that when it eventually has, it would certainly be good to be intentional about it vs. everyone having to scramble at the last minute. If you are thinking on your own, you know about how much you have to give back, are you doing that or have you inadvertently kept that to yourself? Is there a person in the room someone in your team or your back to. It doesn't have to be just 1 person, but you should be thinking about developing a succession plan. In this area, I know that is all new to you, that you could keep them samples sought through.

A couple of years ago, the chapter leadership made a slight change to the bylaws to allow for a "Vice Chair" role. The goal is to be the newly-most-elected officially assumed responsibility on January 1, at which time the outgoing chair would roll off of the board. The assumption was that the Vice Chair would have shadowed the outgoing chair for the year and was 100% ready to take over immediately on January 1st. As you can see, the Vice Chair has learned the "secretary" of what needed to be done and how to do it, and the outgoing chair is free to move on to the four months of chapter operations during transition activities. After seeing this as a recurring theme and realizing this was one of the shortcomings in our Board succession plan, a new adjustment was made to the onboarding process. Now, the Vice Chair is elected/appointed in the year prior to their term. The first six months is only a term-in-kind-off and occur and they will assume full operational responsibility for the rest of the year. What really matters is that we are not looking for time, but the outgoing chair is still participating but is now in the "second chair" - he or she is available and available to help the new chair make sure the handoff is successful. This ensures that when January 1 comes, we're ready to go.

Sometimes it helps to "turn the dial", like the example above, or to participate in mentoring or being mentored. ACHE of Middle TN has a fantastic mentor/mentee program that has just completed/graduated its first cohort. Mentoring is a wonderful way to develop and grow. Please consider participating in this program, either as an experienced leader giving back to the emerging leaders, as an emerging leader that is wise enough to know that they can learn from others that have gone before them. Or do both!

And one last introduction, is to formally pass the baton to Gerd Peters, our rising President. I'm excited to see what Presidents-yet. Make sure to say hello to her on LinkedIn as well as at upcoming events. Our chapter leadership will be on hand at upcoming events to say chapter forward with the rest of the rising board!

Best wishes, Jon Furoscher

A MESSAGE FROM YOUR ACHE REGENT

I've been thinking quite a bit lately about 'joy' in our work, and I know that we are fortunate to work in a field where the work we do helps others at their most basic level of need. We see these moments of joy in our work, but I'm also thinking about Sinek's Start with Why, and thinking about how this work speaks to the connections between the fundamental work we do and what satisfies our individual need for living our values. I also believe that part of finding joy in our work is recognizing the great work of others as well. Here's a few examples:

As a part of ACHE, we're fortunate to be part of an organization that celebrates around the world with the impressive backgrounds of our members and healthcare leadership excellence. For those who have been with ACHE for a while, the organization has undoubtedly had the luck to be part of many celebrations of joy. Your great examples of leaders who have embodied the mission of ACHE have been honored through the Tennessee Regent's Awards for 2022 – 2024, as nominated by our Regent's Advisory Board and voted on by the Governor's Board:

Joseph Webb, DSL FACHE, CEO of Nashville General Hospital

Dr. Webb is our second Senior Cabinet awardee for this year! Dr. Webb is a well-known leader in the Nashville area. Frequently he has participated in educational events. He's also a respected leader in social determinants of health and other healthcare issues that impact our community.

Russell C. Peters, Director of Brain & Spine Services, UT Medical Center

Russ has served in many of the roles within the East Tennessee Chapter, including President. He's UTHC's Executive Sponsor for the Veterans Initiative and has been elected to Chair next year's Centennial event. His nomination letter also highlighted his work with veterans in the area and in the past with the Tennessee Veterans Hospital.

Robin Womeodu, MD, FACHE, Chief Academic Officer, Methodist LeBonheur Healthcare

Dr. Womeodu is recognized for Excellence in Diversity and specifically for her work in eliminating disparities in health. She is the Chief Academic Officer for Methodist LeBonheur Healthcare and she's led the re-start of the Internal Medicine Residency at the Med.

Please join me in congratulating each of these four leaders when you see them, and let's continue to recognize those around us who demonstrate the best in healthcare leadership! I look at as upcoming years, but celebrating leaders like these brings me joy!

Tim

ACHEMT MENTORSHIP PROGRAM ANTICIPATES A SUCCESSFUL YEAR

Following a year with 20+ successful matches, the ACHEMT Mentoring Committee anticipates a successful year ahead for the 2024/25 Mentoring Program.

If you are a student member and an active healthcare executive interested in growth and development, this program is for you. If you are a senior leader, this is an opportunity to share your wisdom, insights, experiences, and to give back to the profession by serving as a mentor. Applications for Fellow can use the mentoring experience as volunteering credit toward Fellowship. Applications for the 2024/25 year are due by anticipated mentee interest.

The application period ends September 27, 2024. Apply on the "Mentorship" page of the ACHEMT website.

Each mentee's interests and career goals are used to match the mentee with a seasoned healthcare professional who will provide guidance and support in their professional development to achieve both near-term and long-term career goals. Mentoring Matching Announcement Date: October 7, 2024

Program Kickoff: October 14, 2024

Following the match announcements, a Mentee/Mentor Match Kickoff Program will be held to facilitate introductions. As the ACHEMT Mentorship Guide and several ACHE supportive career training and assessments are provided to all participants.

Program Duration: The mentee and mentor will collaboratively set their agendas and schedules for the remainder of the 2024-25 mentoring year.

Additional Information: Members of the Mentorship Committee will be available at ACHEMT Program Meetings and will respond to questions emailed to mentorship@ACHEMT.org.

U.S. NAVY OFFICERS RECEIVE PRESTIGIOUS HEALTH INFORMATION TECHNOLOGY AWARD

ACHEMT is committed to highlighting Excellence in Military Healthcare Service Delivery. In our newsletter this month, we will offer a continuous stream of information related to what is happening in our branches of the Armed Forces ACHE Regents. more specifically, a lot of National activity as well as happenings in the Navy. Here is a recent example of Excellence in National ACHE Naval accomplishments:

Navy officers are recent recipients of two prestigious awards for their health information technology work that helped lead the Defense Health Agency's transition to a new electronic health record (EHR) system.

The Navy Medical Service Corps chief selected U.S. Navy Lt. Cmdr. Dayel "Michael Brandon Dayel, Medical Service Corps Officer of the Year (Senior Information Technology Officer for 2023. Bolay will receive the Department of Defense Information Technology Symposia , Aug. 20–22, 2024, in Dallas, Texas.

U.S. Navy Lt. Cmdr. Rafiem Tatou won the 2024 American College of Healthcare Executives Junior Regent Early Career Healthcare Executive Award, which was presented to him in March 2024 at the Lewis E. Angelo Professional Symposium in Chicago, Illinois.

Oh Navy!!!

The Threat of Ransomware Attacks on Hospital Patient Care Networks in the United States

It should come as no surprise these days that ransomware attacks on hospital patient care networks have become a significant threat to healthcare organizations across the United States. These cyberattacks involve malicious software that encrypts critical data, rendering it inaccessible until a ransom is paid to the attackers.

The consequences of such attacks are particularly severe in healthcare settings, where the inability to access patient records, medical devices, and other essential systems can lead to delays in treatment, compromise patient care, and even cause loss of life. In this article I discuss the impact of these ransomware attacks create on hospital networks and propose potential solutions to mitigate this ever-growing threat.

Ransomware attacks on hospitals have become increasingly common, with high-profile incidents demonstrating the vulnerability of healthcare institutions. For example, the WannaCry attack in 2017 affected hospitals in multiple countries, including the United States, causing widespread disruptions. In 2020, the Ryuk ransomware attack severely disrupted services at hospitals across the U.S., highlighting the ongoing risk.

Several factors contribute to the vulnerability of hospital networks to ransomware attacks. First, the reliance on outdated software and systems, which often lack necessary security updates, creates entry points for cybercriminals. Second, the interconnectivity of hospital networks, which includes everything from electronic health records (EHRs) to medical devices, means that a single infected device can potentially compromise its entire network. Third, the high value of data stored within healthcare institutions attracts attackers who are willing to pay substantial ransoms to regain access to their own data.

Ransomware attacks on hospitals can have devastating consequences, with high-profile incidents demonstrating the vulnerability of healthcare institutions. For example, the WannaCry attack in 2017 affected hospitals in multiple countries, including the United States, causing widespread disruptions. In 2020, the Ryuk ransomware attack severely disrupted services at hospitals across the U.S., highlighting the ongoing risk.

Several factors contribute to the vulnerability of hospital networks to ransomware attacks. First, the reliance on outdated software and systems, which often lack necessary security updates, creates entry points for cybercriminals. Second, the interconnectivity of hospital networks, which includes everything from electronic health records (EHRs) to medical devices, means that a single infected device can potentially compromise its entire network. Third, the high value of data stored within healthcare institutions attracts attackers who are willing to pay substantial ransoms to regain access to their own data.

Another critical solution is employee education and awareness. Human error is a common factor in ransomware attacks, with phishing emails often serving as the entry point for malicious software. By educating staff on how to recognize and avoid these threats, healthcare institutions can reduce the likelihood of successful attacks.

Moving forward, healthcare organizations must implement incident response plans that include regular backups of critical data and systems. These backups should be stored securely and offline to ensure that they are not compromised in the event of an attack. Additionally, these plans should outline clear, reliable backup can allow hospitals to restore operations without paying a ransom.

Collaboration between healthcare institutions, government agencies, and cybersecurity experts is also crucial. By sharing information about emerging threats and best practices, we can develop more effective strategies to combat ransomware attacks. Ransomware attacks on hospital patient care networks pose a serious threat to the safety and security of patients in the United States. To mitigate this risk, hospitals must adopt a proactive approach that includes regular cybersecurity assessments, employee training, robust incident response plans, and collaboration with other stakeholders. By taking these steps, healthcare institutions can better protect themselves against ransomware attacks and ensure that patient care is not compromised.

ACHEMT THANKS YOU FOR YOUR SERVICE!

To our Active Duty and Retired Military members and their families… thank you for joining us! A large numbers to attend our September 12th Meeting at Fort Campbell's Volunteer Hall. The weather was dandy!, food was scrumptious, and the stands were full! After the game there was a super good fireworks display that many stayed to enjoy! Thank you to all of the SPONSORS that contributed to the evening! We hope to see you at future events!
